*In your plans it pays to specify
products protected under the paint by*

CrysCoat®

Oakite CrysCoat is a phosphate paint-bonding treatment which makes architectural products look better, last longer. When you specify CrysCoating as the pre-paint process for steel products in your plans . . . products such as window frames, partitions, doors, lighting fixtures, etc. . . . you can do so with confidence that maximum bonding of paint to metal and longer service life for these products is assured, and that building owners will get more complete satisfaction from their investment.

Time and time again it has been proven that nothing surpasses Oakite CrysCoat for bonding paint to metal . . . for protecting steel products against under-paint corrosion, unsightly peeling, and creeping rust surrounding accidental damage to paint.

To the advantage of architects and building owners everywhere, a wide variety of steel products are today protected by Oakite CrysCoating. For some idea of the leading manufacturers who employ CrysCoat phosphate coatings to assure superior paint adhesion and greater resistance to corrosion for their architectural products, just turn the page . . .
